

Uptown Westerville project paused, to finish in 2020

To our valued customer,

Thank you for your continued patience and understanding as we upgrade our natural gas system that serves the Uptown Westerville community. We have made tremendous progress in phase one and phase two of this project, as we prepare the area for the City's Uptown Improvement Project.

In observation of the holiday season and the City's construction quiet time, we will temporarily pause this project and finish in early 2020. Your natural gas service will continue to be safe and reliable and will not be affected by this pause of gas line construction activity.

We have a small part of phase two to complete, which will consist of main line installation and two customer service lines. Phase three, our last remaining part, will consist of main line installation and service line installation on the east side of State Street between College Avenue and North State Street (just north of Home Street).

As soon as we know when construction will resume in your neighborhood, we will reach out and ensure you are kept up-to-date on all the details. Our contractor, Miller Pipeline, will also be in touch with you before any work resumes at your property.

Restoration will continue as we clean-up completed work and prep the area for winter. Where work has been completed, we will complete full restoration. Metal plates will be removed and construction areas will be filled.

In the meantime, please contact me at (614) 420-1376 or lpapalko@nisource.com with any questions.
